

Editorial Calendar

NOVEMBER 2008

- Deposition
- Automation
- Nanotechnology

DECEMBER 2008 / JANUARY 2009

- Final Manufacturing
- Device Construction
- Automation
- Supplement - Materials

FEBRUARY 2009

- Lithography
- Investment
- Inspection

MARCH 2009

- Emerging manufacturing techniques
- CMP
- Sub Systems

APRIL 2009

- Deposition
- Extending 200mm
- Automation
- Supplement Vacuum

JUNE 2009

- Light source
- Inspection
- Environmental

JULY 2009

- Planarisation
- Materials
- Geographical focus

SEPTEMBER 2009

- Emerging opportunities
- Geographical focus
- Test

MID-SEPTEMBER 2009

- SEMICON Europa special

OCTOBER 2009

- Metrology
- Wafer processing
- Assembly
- Supplement - MNS

DECEMBER 2009 / JANUARY 2010

- CMP
- Automation
- The year that was
- Supplement - Materials

Editorial Guidelines

Rationale

EuroAsia semiconductor provides an informative magazine that enables those working in the semiconductor and silicon related industries to become aware of trends, challenges and opportunities that exist today with a specific focus on the markets and synergies of the European and Asian sectors. We recognise that no one can be an expert in all fields and many of our readers do not use English as a first language. While being technically based, the information must be easy to understand and provide direction for those wishing to follow up in a more detailed fashion.

Size

An abstract of the article, of around 100 words, is required for editorial consideration. Articles should be between 1400 – 2100 words long. Every article should be accompanied by 4 – 8 images. You should indicate any images you would prefer to be used and captions should be clearly described in a word document.

Format

Articles can be submitted electronically or via certified mail as a CD. Text should be in the form of a word document. Images can be sent electronically as a J-peg or Tiff attachment. Images should ideally be 3600 pixels wide at 600dpi but 1800 pixels wide at 300dpi is the minimum that can be accepted. Images can be sent via FTP with prior arrangement.

Timing

All articles should be received by the date agreed with the editorial department. Any change to the deadline must be agreed with the editor. Contact with any issues.

Editing

All material received is edited for style, readability and length. This is carried out with sensitivity to the original meaning. Articles are generally placed in the original format on the web. Any alterations required must be planned at least three weeks before publication. Companies do not have a right to view layouts or edited versions. The editor may be approached for requests. The Editor has final say in all matters.

Content

While it is understandable that companies wish to promote they, do not submit an advertisement in the guise of an article. Our readers are interested in the trends, challenges and opportunities and how it can assist them. Any technology discussed and is shown to be beneficial then products will sell themselves. Writing an article with an institution or client provides objectivity. Look at the industry as a whole and where the technology fits in as well as any emerging opportunities.

Company

All material submitted must include a contact name and all address details for any sales leads the magazine may receive. These will not be published.

Contacts

All material, questions and information should be directed to the editorial department, contact
